

## CROSS TOOLS-2

Date.

No.

I copied two folders to the user home location the points those locations in `~/localunit/sdk/Makefile`. Also I did export the compiler location to `PATH` env variable. as

```
export PATH="/ti-processor-sdk-.../linux-devkit/  
sysroots/x86_64-arago-linux/usr/bin/:$PATH"
```

After installing ti SDK as per their web instruction I installed the SDK in user home directory `~/`. Then I copied the whole sanion directory to the user home directory, it took 6 hours.
