

NFS Drive

Date.

No.

Making a NFS drive from online tutorial did not work well.

/etc/exports this file contains setup for each NFS location.

/var/nfs/general *(rw,nohide,insecure,no-subtree-check,no_root_squash)

~~we~~ create this folder /var/nfs/general.

For installation of nfs-kernel-server visit online.

After any change to /etc/exports, restart nfs by sudo systemctl restart nfs-kernel-server.

In ~~the~~ the client creat a directory for mount the nfs (general), ~~we~~ mount like-

mount 192.168.10.16:/var/nfs/general general.
